3.10 Scores (Lab 3.2)

LAB ACTIVITY | 3.10.1: Scores (Lab 3.2) | Full screen | 0 / 23

First, download this template and rename it `scores.py`:

- template.py

Within this file, write code to implement the following algorithm:

> **Create** a dictionary called `score_dict` that has the names "Joe", "Tom", "Barb", "Sue", "Sally" associated with the scores 10, 23, 13, 19 and 12 respectively. Do this by using literal values, not user input.
> **Print** an expression computes Barb's score.
> **Update** the score for Sally to be 13.
> **Delete** Tom and his score from scoreDict (e.g., because he's just dropped the course).
> **Print** the resulting dictionary.
