3.9 User ID (Lab 3.1)

LAB ACTIVITY | 3.9.1: User ID (Lab 3.1) | Full screen | 0 / 23

First, download this template and rename it `user_id.py`:

- template.py

A university uses the following scheme to construct user ids: concatenate the first letter of the student's first name, their full last name, and the first 2 digits of their student id number. Write an interactive program to generate a student's user id. Use the following algorithm:

Prompt for and store the first name (prompt: `First name: `).
Prompt for and store the last name (prompt: `Last name: `). (You can assume that last names have no spaces.)
Prompt for and store the student number (prompt: `Student ID: `). (Consider whether this should be an int or a string.)
Compute the login id. (You can use `login = login.lower()` to create an id that has all lowercase letters.)
Print the login id (e.g., `User ID: ???`).

Here is an example user interaction.

```
First name: Jane↵
Last name: Doe↵
Student ID: 123456789↵
User ID: jdoe12
```
