4.11 Automobile service cost (Lab 4.0)

LAB ACTIVITY | 4.11.1: Automobile service cost (Lab 4.0) | Full screen | 0 / 10

First, download this template and rename it `automobile.py`:

- template.py

Write a program that prompts the user for an automobile service. Output the user's input back out and then output the price of the requested service. E.g.,

```
service: oil change↵
cost of oil change: $35
```

The program should support the following services:

- oil change – $35
- tire rotation – $19
- car wash – $7

If the user enters a service that is not listed above, then output the following error message:

```
service: teleportation↵
error: teleportation is not recognized
```

Grading

- **90% – Correctness**: Your programs should run as specified.
- **5% – Efficiency**: Your programs should do as little computation as possible.
- **5% – Understandability**: Your programs should be easy to read.

*This is based on a ZyLabs example.
