CS-104 Quiz 1

Fall 2026

Name: _____

This is an in-class, closed-book quiz. If you have any questions, please feel free to ask them. When you are finished, you can turn it in and go.

1. (2 points)

Give the value of each Python expression below. Remember the resulting type (int, float, str...)! If it raises an error instead, name the error (e.g., "IndexError").

```
>>> 'x' + 'y'
```
'xy' — example answer

```
>>> 15 // 4
```

```
>>> 3 ** 4
```

```
>>> 4 * 2.0
```

```
>>> 4 / 2
```

```
>>> [10, 20, 30][5]
```

2. (3 points)

For each code segment below, identify the error and briefly explain how to fix it.

a)

```
print('I can't stop coding!')
```

b)

```
turtle.pendown
turtle.forward(75)
turtle.penup
```

c)

```
a = 2
b = 3
c = -4
x = 1
y = ax**2 + bx + c
```

d)

```
age = input("Enter your age")
age = age + 1
print(age)
```

3. (3 points)

Write a code segment that inputs a number of total seconds from the user (as an integer) and prints how many whole minutes and remaining seconds that is. Here is an example run:

```
Total seconds: 130
Minutes: 2, remaining seconds: 10
```

Note that you should: - implement the prompt as shown (`Total seconds: `). - use `//` and `%` as appropriate to compute the minutes and remaining seconds. - print the result in the format shown above.

Just write a code segment; you don't need to include documentation, an algorithm, or test cases.

4. (1 point)

a) Write a statement that creates a list called `sizes` containing the strings `'small'`, `'medium'`, and `'large'`.

b) Write a statement that changes the **first** element of `sizes` to `'tiny'`.

5. (1 point)

Consider the dictionary defined below.

```
ages = {'Sam': 21, 'Lee': 19}
```

Write a statement that adds a new entry mapping `'Kim'` to `22`, or explain why this cannot be done.
