CS-104 Quiz 2

Fall 2026

Name: _____

This is an in-class, closed-book quiz. If you have any questions, please feel free to ask them. When you are finished, you can turn it in and go.

1. (2 points)

Give the value of each Python expression below. If it raises an error instead, name the error.

```
>>> not True
```

False — example answer

```
>>> False or True
```

```
>>> 6 >= 6 and 1 > 9
```

```
>>> 8 != 8
```

```
>>> 2 < 1 or 4 > 3
```

2. (3 points)

Write a code segment that inputs a numeric test score from the user (as a float, 0-100) and prints one of the following, based on the value:

- `"A"` if the score is 90 or above - `"B"` if the score is at least 80 and below 90 - `"C"` if the score is at least 70 and below 80 - `"F"` if the score is below 70

Just write a code segment; you don't need to include documentation, an algorithm, or test cases.

3. (2 points)

Fill in the blanks in the `range(...)` call below so this code prints every multiple of 4 from 4 to 40, inclusive:

```
for n in range(___, ___, ___):
    print(n)
```

4. (2 points)

Consider the following (syntactically correct) code segment:

```
total = 0
for i in range(2, 21, 2):
    total = total + i
print(total)
```

Write a `while` loop that does the same thing.

5. (1 point)

The following code is supposed to print the numbers 1 through 5, but it has a bug. Identify the bug and explain how to fix it.

```
i = 1
while i <= 5:
    print(i)
```
