CS-104 Retrieval Quiz (ANSWER KEY)

Fall 2026 · Week 5, Monday

Name: _____

Closed book, no devices. For questions 1–3, circle the one best answer. For question 4, write your code in the space provided (no algorithm, documentation, or test cases needed).

1.

Which loop prints `20`, `15`, `10`, `5` (in that order)?

a) `for n in range(20, 5, -5): print(n)`

b) `for n in range(5, 20, 5): print(n)`

c) `for n in range(20, 0, -5): print(n)` **[correct]**

d) `for n in range(20, 0, 5): print(n)`

2.

What does this code print?

```
total = 0
for i in range(1, 6):
    if i % 2 == 0:
        total = total + i
    else:
        total = total - 1
print(total)
```

a) `15`

b) `3` **[correct]**

c) `6`

d) `-3`

3.

What does this code print?

```
i = 10
total = 0
while i > 0:
    total = total + i
    i = i - 3
print(total)
```

a) `21`

b) `18`

c) `22` **[correct]**

d) `10`

4.

Write a code segment that keeps asking the user for whole numbers until they enter `0`. Then it prints how many numbers were entered (not counting the 0) and the largest one. It must work even if every number is negative, and you may not use `max` or a list.

Sample solution:

```
count = 0
largest = None
n = int(input("Number: "))
while n != 0:
    count = count + 1
    if largest is None or n > largest:
        largest = n
    n = int(input("Number: "))
print(count, largest)
```
