CS-104 Retrieval Quiz (ANSWER KEY)

Fall 2026 · Week 6, Wednesday

Name: _____

Closed book, no devices. For questions 1–3, circle the one best answer. For question 4, write your code in the space provided (no algorithm, documentation, or test cases needed).

1.

In what order do the lines of output appear?

```
def greet(name):
    print("Hello, " + name)
# --- main program ---
print("Start")
greet("Sam")
print("End")
```

a) `Hello, Sam`, then `Start`, then `End`

b) `Start`, then `End`, then `Hello, Sam`

c) `Start`, then `Hello, Sam`, then `End` [correct]

d) Only `Start`, then `End`

2.

What do the two calls print?

```
def show(a, b):
    print(a, b)
# --- main program ---
show(1, 2)
show(b=1, a=2)
```

a) `1 2`, then `1 2`

b) `1 2`, then `2 1` [correct]

c) `1 2`, then an error

d) `2 1`, then `2 1`

3.

What is the complete output of this code?

```
def add_one(x):
    print(x + 1)
# --- main program ---
result = add_one(5)
print(result)
```

a) `6`, then `6`

b) Only `6`

c) `None`, then `6`

d) `6`, then `None` [correct]

4.

Write a function `count_above(numbers, limit)` that returns how many elements of the list `numbers` are greater than `limit`. Then write one line that calls it with the list `[3, 8, 1, 9, 5]` and the limit `4`, and prints the result (which should be `3`).

Sample solution:

```
def count_above(numbers, limit):
    count = 0
    for n in numbers:
        if n > limit:
            count = count + 1
    return count

print(count_above([3, 8, 1, 9, 5], 4))
```
